

WNTC

WNTC Radio, located in the Chemistry Annex behind the Chemistry Library, plays creative contemporary music combining the best of reggae, soul and Top 40 music, both new and old. WNTC operates on an unusual frequency of 16.400 and carries FM programs including a history course of Puritan and nonconformist music. Some of the special programming includes the Black College Radio Night Show, a Women Only Show, 10 Minutes, and Earth News. To keep the college community informed, continuously announcements, news weather, and sports are aired throughout the day. WNTC staff members have been busy this school year remodeling the entire station. The plans of remodeling began during summer 1991 when Clarkson put a new roof on the Chemistry Annex, creating new space for WNTC, moving it to a total remodeling of the building's interior. Another renovation this year was a change in station broadcasting. WNTC's programming system was increased in any phase of radio to step in any further refinements.

ICRN is an organization dedicated to all facets of radio broadcasting. Our two radio stations bring the students of WNTC and LCT the best in music, news, and educational programming on AM and commercial FM waves, and the opportunity for any interested students to work in radio. ICRN is the only student organization, which operates on both campuses school-year-round and is funded by both WCN and CCAA sources.
